Hawkeye Shelf Life Statement

This statement concerns the shelf life of Duratec & Aqua Buff products and supercedes any other statement prior to the date noted below.

Most Duratec products have a warranted six-month shelf life, starting on the day of manufacture. The manufacturing date is printed on the label. The shelf life applies at 77° for storage indoors.

The exceptions to the Duratec six-month shelf life are:

- ° Certain fast-cure primers such as Duratec 707-119 (three months)
- ° Duratec Polyurethane Sealer 5604-001 and 5604-002 (one year)
- ° Duratec Thinner 39LAC-3 and Duratec Pot Life Extender 39GEL-X (one year)

Aqua Buff has at least one year of shelf life.

If stored in favorable conditions Duratec is often fit-to-use for longer than six-months. The fitness of the Duratec can be confirmed by thorough mixing and a cup gel test.

The shelf life of the Duratec products will vary with the storage temperature. In all cases, low storage temperatures will increase the shelf life. When stored in a freezer, Duratec will last indefinitely. On the other hand, high temperature exposure and opening the container will dramatically decrease the shelf life.

We ship all products with at least three months of shelf life remaining and the majority of our production is shipped within a couple of weeks of manufacturing.

Please call either your Hawkeye Technical Sales Rep directly or our team at (909) 546-1160 with any questions you may have.
